About Dataset

The Sign Language MNIST is presented here and follows the jpeg image format with labels . The American Sign Language letter database of hand gestures represent a multi-class problem with 24 classes of letters (excluding J and Z which require motion).

This dataset has been adopted from [Sign Language MNIST](#), converting csv file into images also decreasing the overall size of database.

There are a total of 27,455 gray-scale images of size 28*28 pixels whose value range between 0-255. Each case represents a label (0-25) as a one-to-one map for each alphabetic letter A-Z (and no cases for 9=J or 25=Z because of gesture motions).
